Flock Transparency Portal- This is a portal feature within Flock. It will show what is detected, not detected, acceptable use policy, prohibited uses, access policy, hotlist policy, data retention (30 days), number of LPR cameras (2), total cameras (2), sharing network data with (none), receiving network data from (none) and hotlist alerted on.
Flock Data Retention- 30 days, I included this just in case you only wanted to meet his request for retention.
Hotlist Deconfliction List Opt-in- We have this disabled; this sends notification of a plate match with other organizations that have enabled this feature.
Devices- This list the number of devices. This can be confusing because it shows three but there are only two cameras, the other is a Picard.
Flock Networks- This shows the networks that we have and are part of. We are only part of our network and not with any others. The reason I provided the other devices attachment was that it shows 3 devices, so I figured he may question why we say we have two.
Flock Policies- I have audit assistance activated. This is a feature that will assist me when audits are completed to help ensure I am not missing any potential violations. Under sharing policy, we don't receive federal share requests.
Flock Overview- This just gives details of our account and shows there is no MOU signed.
Flock Admin Settings- Allow sharing networks are deactivated as well as data preservation requests. The only thing activated is zone filtering and use the file validator. This last one is the **search features**. Anything that is not checked they cannot look for so as an example they can't ask the system to do a convoy search . This would look for two vehicles that travel past the cameras around the same time or in a pattern. The "can have hotlist enabled" , but this would only be used locally. We would be using the hotlist for trespassed individuals, welfare checks, etc. We have no hotlist sources and not set for unknown plates for hotlist alerts.
The **Excel form** is an audit I did for the Flock system that shows a search from 6/16-7/16. The only case and tag found was for my own vehicle as I was using this to build an LPR Power Point showing how the system works including audits.

I wanted to provide you with everything and allow you to determine what the individual needs to be sent. Any questions call me on my cell- [redacted]
